.505 Gibbs Magnum
525 gr Solid or SN

.425 Westley Richards Magnum
410 gr Solid or SN

.300 H&H Flanged Magnum
220 gr Solid or SN

In re-introducing the KYNOCH brand of Nitro-Express Cartridges, Kynamco Limited have undertaken to maintain the quality and reliability standards that made KYNOCH the most respected name in Sporting Ammunition for over 100 years. KYNOCH established the pre-eminence of British Sporting Cartridges during the heyday of big-game shooting in Africa and India before the First World War, and with the English Trade, developed the famous ranges of British Sporting proprietary cartridges - Holland's acclaimed and innovatory belted Magnums, Rigby's .416", Westley's .425", Gibb's .505 and Jeffery's legendary .600" Nitro Express.

Much work has been devoted to duplicating original loads, which mostly used Cordite, by blending modern powders and testing with ranges of primers to obtain both the correct internal and external ballistics. This work has been conducted in close conjunction with the Proof Houses, and naturally all new KYNOCH ammunition carries Birmingham Proof House CIP approval in conformity with the specifications of the original loadings, as previously proofed in Birmingham. This development was conducted in parallel with much range work, firing the new loads in back to back testing with original IMI made Kynoch ammunition from the 1960's. This ensures that, when fired from older guns, and particularly double rifles originally regulated for Cordite loads, re-regulation for both grouping and point of aim is generally not required.

This careful research also ensures that the duplicate of original ballistics is delivered at lower breech pressures and much cooler burning temperatures and consequently gives reduced lead erosion compared with original ammunition. Additionally, all new tooling has been produced to draw cases from military specification brass stock to the original KYNOCH drawings and dimensions, but with modern Boxer primers.

The choice of bullets for these loads has also been the subject of exhaustive testing, both for external and terminal ballistic performance, and also to accommodate the extensive bore and rifling dimensional variations from published nominal standards that can frequently occur in older rifles. KYNOCH ammunition is now standardised on Woodleigh Welded Core Soft-nosed and Solid bullets, which are recognised world wide as the most reliable big game bullets currently manufactured.

Kynamco combines this technical development and manufacturing base with knowledge and experience of the British Gun Trade and their products from the view points of use in the field and practical African experience, of collection and restoration/repair/conversion of these exceptional weapons, and of determination to provide the means to keep British big game rifles shooting well past the centenary of the introduction of the Nitro Express Cartridge.

KYNOCH Nitro Express cartridges are available from your dealer or distributor, and full technical information is available direct from Kynamco Ltd.
